ZENITH LEARNING / SAMPLE MATERIAL

Chemistry - Practice Paper

Original sample questions. Not an official previous-year exam paper.

1. Which particle has a negative charge?

A. Proton
B. Neutron
C. Electron
D. Nucleus

2. What does atomic number count?

A. Neutrons
B. Protons
C. Protons plus neutrons
D. Electron shells

3. A solution with pH 3 is:

A. Acidic
B. Neutral
C. Alkaline
D. Always pure water

4. Which formula represents water?

A. CO2
B. O2
C. H2O
D. NaCl

5. Which gas is commonly released when an acid reacts with a carbonate?

A. Hydrogen
B. Oxygen
C. Nitrogen
D. Carbon dioxide

ZENITH LEARNING / SAMPLE MATERIAL

Chemistry - Answer Guide

Original sample questions. Not an official previous-year exam paper.

1. Which particle has a negative charge?

Answer: C. Electron

Electrons carry negative charge.

2. What does atomic number count?

Answer: B. Protons

Atomic number equals the number of protons.

3. A solution with pH 3 is:

Answer: A. Acidic

A pH below 7 is acidic in ordinary aqueous conditions.

4. Which formula represents water?

Answer: C. H2O

Water contains two hydrogen atoms and one oxygen atom.

5. Which gas is commonly released when an acid reacts with a carbonate?

Answer: D. Carbon dioxide

Acid-carbonate reactions produce salt, water and carbon dioxide.
